

SUEC  San PROSPERO

*partnership first*

## COMPANY

SUECOSanPROSPERO was born from the merger of SUECO based in Faenza (RA) and Vinicola San Prospero located in Imola (BO).

The history and know-how resulted in one of the most important companies in the grape derivatives sector. Cutting-edge systems and technologies make SUECOSanPROSPERO a reference point in its field, proposing itself as a leader in the supply chain from grapes to the finished product.

With its two production sites, Faenza as a food plant and Imola (BO) as an oenological one, SUECOSanPROSPERO offers a wide range of products for Italian and international customers in the various formats and packaging required.

Technologically advanced systems and processing methods, combined with the control of production parameters at every stage of the process, make SUECOSanPROSPERO the ideal partner for wineries and food industries that intend to obtain safe products of high and constant quality.

Our strength is the ability to combine the considerable production capacity, supported by the efficiency of the plants, with the flexibility and direct dialogue necessary to meet the needs of our partners.

## **WINES**

Talking about wine in our area is quite common. SUECOSanPROSPERO is the spokesperson for the cultural heritage of its territory. The wine sector is one of the strengths of our company thanks to the proven experience and preparation of our oenologists.

Our offer includes "tailor-made" wines in a wide range of types, conventional and organic, intended to meet the most varied market demands.

## **JUICES and DESULPHURATED GRAPE MUSTS**

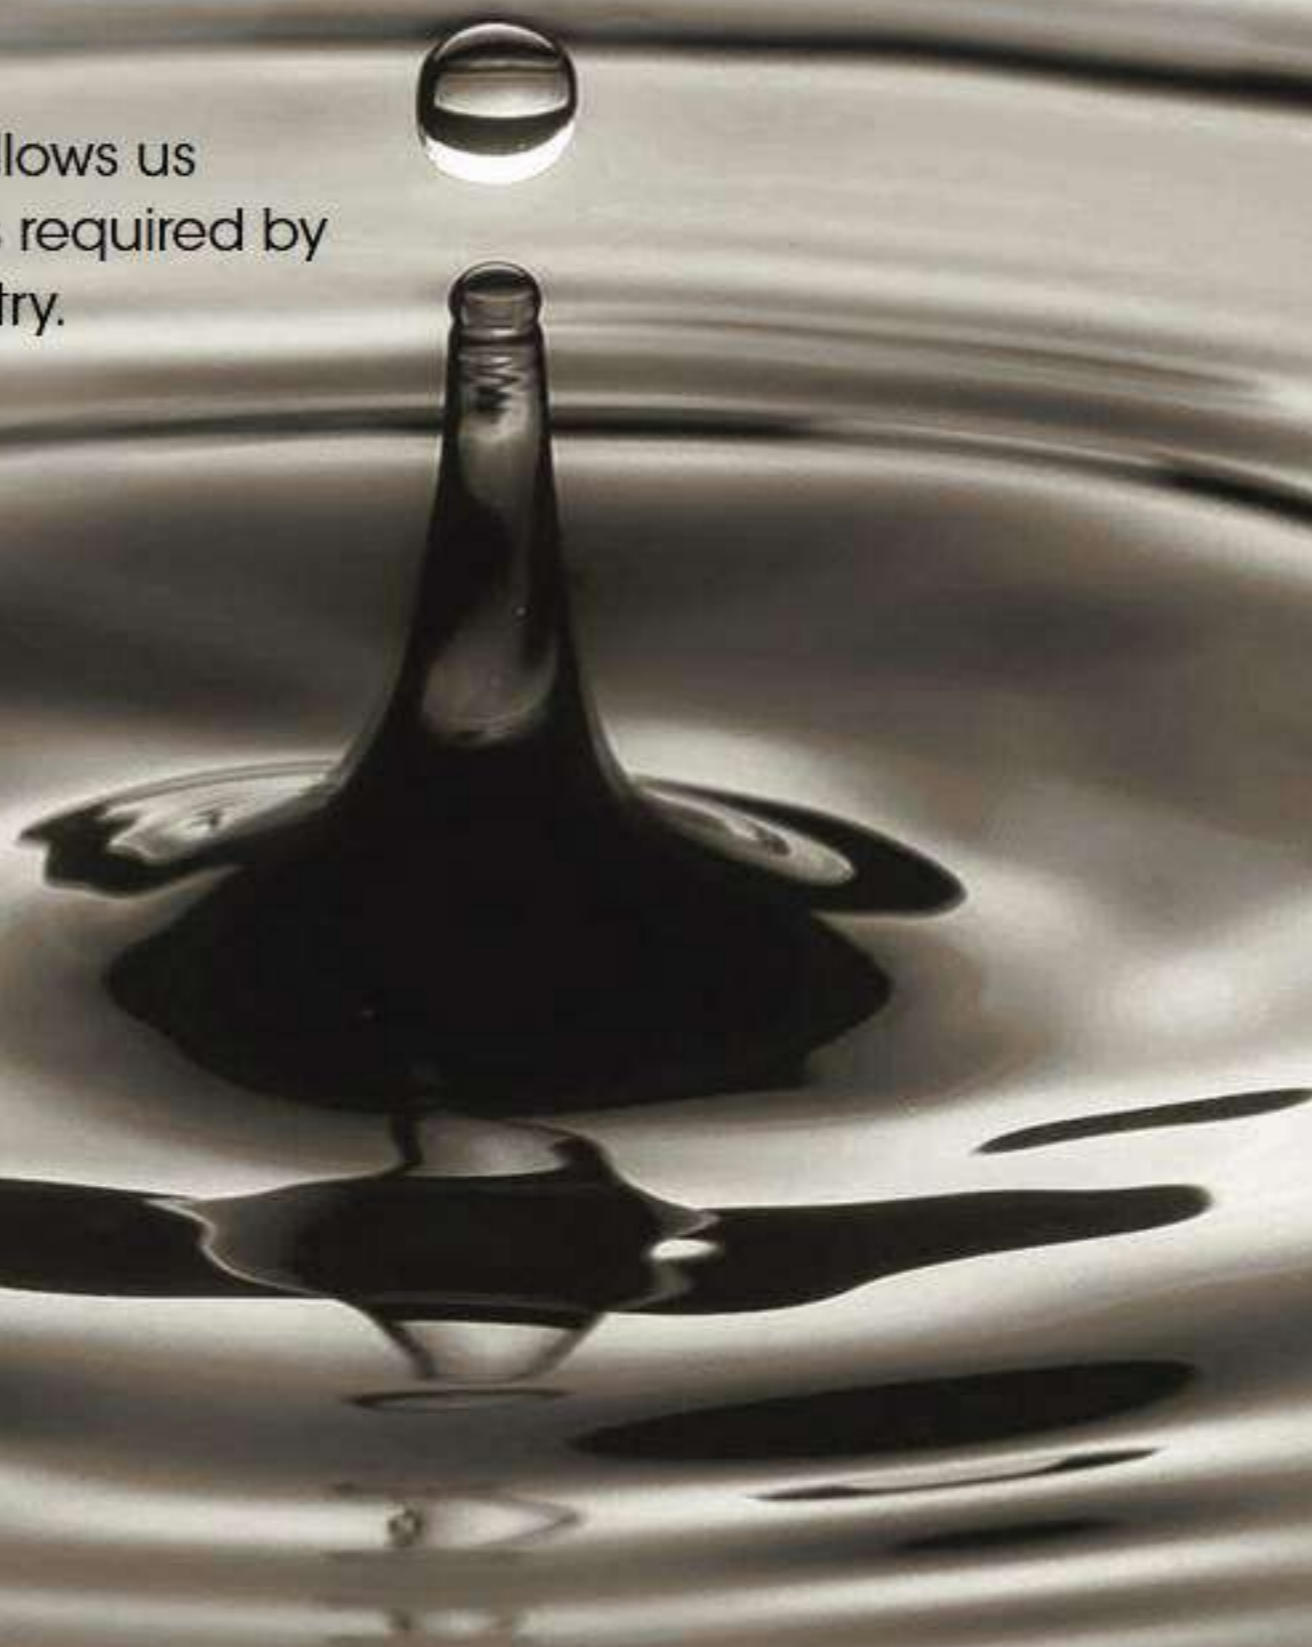

Our grape juices keep the fragrance and freshness of the fruit intact. In our processing methods we always pay particular attention to the choice of the most suitable grape varieties to obtain a juice having the right balance between sugar, acidity and aroma. Our commitment and professionalism in this sector have grown thanks to the consensus of the most important European market players who have appreciated our reliability and the guarantee of high-quality standards.

## **RECTIFIED GRAPE MUST CONCENTRATE (GRAPE SUGAR)**

The rectified grape must concentrate, also well-known as “deionised” grape juice or grape liquid sugar, is a totally natural product that is presented in liquid, colourless form, with a commercial concentration from 65 ° up to 70 ° brix.

A long-tested production process allows us to comply with all the specifications required by the food, beverage and wine industry.

## **COOKED GRAPE MUSTS**

We produce cooked grape must for the preparation of balsamic vinegar and aromatic condiments widely used in the food industry in Italy and abroad.

## **GRAPE JUICE CONCENTRATES**

The raw materials that arrive in our factories are carefully selected, mixed, concentrated and filtered to obtain grape concentrates with a degree from 65 ° to 68 ° brix.

These products are perfectly compatible both in the wine sector, for the various enological uses of enrichment, and in the food & beverage sector for the production of grape-flavoured or multi-fruit drinks and jams.

## **ORGANIC**

SUECOSanPROSPERO can claim the production of grape organic juices, concentrates, wines and liquid sugars of high and constant quality, thanks to the systematic control of the absence of pesticides and sulphites, and to the careful selection and loyalty of suppliers.

## QUALITY and CERTIFICATIONS

The company has the best technologies available on the market in order to best preserve the natural characteristics of the raw material used.

Our internal laboratory, equipped with a cutting-edge machinery,

is able to carry out in-depth chemical-physical, organoleptic and microbiological tests.

Every single activity of our company is managed by procedures, in particular those relating to production, which allow full traceability and control at any time.

The selection and evaluation of each supplier is managed with objective parameters set out in the quality manual.

All products are subjected to a rigorous analytical control before their insertion in the production process.

We are members of the SGF, an important German organization for voluntary self-control in the production of fruit juices.

We are ISO 9001, FSSC 22000.
